

First Investors Funds

This performance data represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance may be higher or lower than the performance data quoted. For current performance information as of the most recent month-end, please visit our web site at foresters.com.

Mutual Funds Performance at a Glance

April 2018

Notes

MONEY MARKET FUNDS

a An investment in the Government Cash Management Fund (“Fund”) is neither insured nor guaranteed by the Federal Deposit Insurance Corporation (FDIC) or any other government agency. Although the Fund seeks to preserve the value of your investment at \$1.00 per share, it is possible to lose money by investing in the Fund. Advisory fees were waived and certain expenses reimbursed on the Fund through 3/31/18. Therefore, yields on this Fund were higher than they would have been had fees not been waived.

CLASS A AND B SHARE PERFORMANCE AND RISKS

b Performance of Class B shares will differ from Class A shares because each class is sold pursuant to different sales arrangements and bears different expenses. Redemptions of Class B shares may be subject to a deferred sales charge. All Total Return figures for the Funds assume that all dividends and distributions have been reinvested at NAV. SEC Total Return figures assume the payment of the maximum sales charge in the case of Class A shares and the applicable contingent deferred sales charge (“CDSC”) in the case of Class B shares. NAV Total Returns are calculated without a sales charge or CDSC. The maximum sales charge on Class A shares is 5.75% for Equity Funds and 4% for Income and Tax Exempt Funds, except for Floating Rate Fund and Limited Duration High Quality Bond Fund which is 2.5%. The maximum CDSC on Class B shares is 4%, declining to 1% over six calendar years, after which there is no CDSC. Class B shares will automatically convert to Class A shares approximately eight years after the date of purchase. There is no sales charge on dividend or capital gain reinvestments. In addition, some of the fees and/or expenses of certain Funds (both Class A and Class B shares) were either waived or assumed during certain periods. Total Return figures would have been lower if Fund fees and/or expenses had not been waived or assumed.

c Refers to Total Returns since inception date if period is less than 10 years.

d The Hedged U.S. Equity Opportunities, International, Global and International Opportunities Bond Funds invest in foreign securities. Foreign investments involve additional risks, including risks arising from currency fluctuations, government regulation, unfavorable political or legal developments, differences in financial reporting standards, and less stringent regulation of foreign securities markets. Strategic Income Fund invests in underlying funds that invest in these types of securities.

e These Funds invest in small- and mid-cap stocks. These stocks tend to experience sharper price fluctuations than large-cap stocks. The additional volatility associated with small- to mid-cap stocks is attributable to a number of factors, including the fact that the earnings of small- to mid-size companies tend to be less predictable than those of larger, more established companies. Strategic Income Fund invests in underlying funds that invest in these types of securities.

f The Fund is associated with the risks of investing in the real estate industry. In addition, investments in REITs are subject to additional risks, including those related to adverse governmental actions, declines in property value, and the potential failure to qualify for tax-free pass through of income and exemption from registration as an investment company. Investments in REITs may be volatile. REITs are pooled investment vehicles with their own expenses, and the Strategic Income Fund invests in underlying funds that invest in these types of securities.

g The Covered Call Strategy, Premium Income, and Equity Income Funds invest in covered calls. Writing call options to generate income and to potentially hedge against market declines involves risks, such as potential losses if equity markets or an individual equity security do not move as expected and the potential for greater losses than if these techniques had not been used. By writing covered

call options, the Fund will give up the opportunity to benefit from potential increases in the value of a Fund asset above the strike price, but will bear the risk of declines in the value of the asset. Strategic Income Fund invests in underlying funds that invest in these types of securities.

h. The Hedged U.S. Equity Opportunities Fund uses hedging to limit downside risks, but it also will limit the Fund’s return potential. Hedging activities involve fees and expenses, which can further reduce the Fund’s returns.

i. The Long Short Fund’s short strategy depends on counterparties from which the Fund borrows securities. The Fund must pool collateral when borrowing securities and the Fund is subject to the risk of default by a counterparty, which could result in a loss of collateral and money owed to the Fund.

j The Fund For Income and to a certain extent Floating Rate, Balanced Income, Investment Grade, Limited Duration Bond, and Total Return Funds seek a high level of current income by investing in high-yield bonds (junk bonds). The issuers of the bonds pay higher interest rates because they have a greater likelihood of financial difficulty, which could result in their inability to repay the bonds fully when due. Prices of junk bonds are also subject to greater fluctuations. Strategic Income Fund invests in underlying funds that invest in these types of securities.

k The Floating Rate Fund and to a certain extent Fund For Income seek a high level of current income by investing in floating rate loans and/or bonds, generally below investment grade (junk bonds). The issuers of the floating rate loans and bonds pay higher interest rates because they have a greater likelihood of financial difficulty, which could result in their inability to repay the loans and/or bonds when due. Strategic Income Fund invests in underlying funds that invest in these types of securities.

l These funds generally attempt to purchase high quality municipal securities that are: (a) rated as investment grade, at the time of purchase, by at least one nationally recognized statistical rating organization, such as Moody’s Investors Service, Inc., Standard & Poor’s Ratings Service, or Fitch Ratings; or (b) if unrated, are determined by the Fund’s Adviser to be of investment grade quality. To a lesser extent, the Tax Exempt Income and Tax Exempt Opportunities Funds may invest in high yield, below investment grade municipal bonds (commonly known as “high yield” or “junk bonds”). Strategic Income Fund invests in underlying funds that invest in these types of securities.

m SEC yield and taxable equivalent yield calculations are for the 30 day period ended 3/31/18. The taxable equivalent yield calculations are based upon an assumed 37% federal tax rate.

n The distribution rates are calculated by adding the dividends for the last 12 months and dividing the sum by the Fund’s net asset value per share as of the end of that period.

o Dividends, if any, are distributed monthly for all income funds. Capital gains, if any, are distributed annually.

p Total annual fund operating expenses are gross any of fee waivers as set forth in the current prospectus.

SALES CHARGES AND DEALER CONCESSIONS

Rule 12b-1 fees are currently being paid by the Funds.

q There is no sales charge for transactions of shares of First Investors funds of \$1 million and over into one Fund account. Foresters Financial will pay a concession equal to 0.90% of the amount invested to dealers on such purchases. A CDSC of 1.00% will be deducted from the redemption proceeds except in certain circumstances. The CDSC will be calculated in the same manner as the CDSC on the Class B shares.

r Discount calculator: Divide this factor into net asset value to determine discounted offering price.

s Class B shares automatically convert into Class A shares after approximately eight years.
